## EXPERIENCE

### Prudentbit (Immunefiles)

Noida, India

CTO & Founding Engineer

Jan 2024 – Present

*Immunefiles is a secure enterprise document collaboration and AI platform. In production at Toyota, Mitutoyo, DC Technologies, Startup Movers, etc. serving 500+ users.*

#### Product & Leadership

- Owned end-to-end technical direction as CTO architecture, stack decisions, hiring, roadmap, and customer-facing technical conversations during enterprise sales and onboarding.
- Took Immunefiles from zero to production deployments at five enterprise customers including Toyota and Mitutoyo, shipping iteratively against real customer feedback rather than fixed specs.
- Led security and compliance posture required to close enterprise buyers, including SSO, RBAC, secrets management, audit logging, and SSL/TLS across all services.

#### AI / LLM Systems

- Built and shipped the document-grounded LLM layer powering Immunefiles using Retrieval-Augmented Generation, semantic search, and embedding pipelines across enterprise documents in production.
- Designed modular ingestion pipelines for PDF, DOCX, PPTX, CSV, and XLSX with automated parsing, semantic chunking, and indexing, letting customers onboard their document corpora in hours.
- Architected multi-agent LLM workflows with persistent context, stateful execution, and controlled prompt routing for complex enterprise document tasks.
- Implemented prompt governance and safety controls to reduce hallucinations and enforce policy-bound responses for regulated enterprise environments.
- Shipped multilingual privacy-aware NLP pipelines to detect and mask regulated identifiers (PII, financial, healthcare) across structured and unstructured customer data.
- Deployed AI capabilities as independently scalable FastAPI microservices with GPU-accelerated inference (CUDA), tracing, and exception handling for production reliability.

#### Infrastructure & Platform

- Architected and deployed 15+ containerized microservices using Docker, Kubernetes, Helm, and Nginx, delivering 99.9%+ availability across enterprise customer environments.
- Built GitHub Actions CI/CD pipelines automating build, test, image publishing, rollout, and rollback, cutting deployment time by 80% and enabling multiple production ships per week.
- Provisioned cloud infrastructure with Terraform for repeatable, consistent deployments across dev and production.
- Implemented cloud-native traffic management and security with Azure Application Gateway, Cloudflare, WAF, and centralized SSL termination.
- Secured application secrets via Azure Key Vault with RBAC, eliminating plaintext credentials across production services.
- Built end-to-end observability with Prometheus, Grafana, centralized logging, and Sentry, reducing MTTR by 60%.
- Optimized cloud architecture to reduce infrastructure costs by 40% while maintaining 99.9%+ availability across all customer deployments.
- Deployed and operated RabbitMQ clusters and Microsoft Office / Collabora WOPI servers to power secure document collaboration and event-driven workloads.
- Developed reusable k6 performance, load, and stress testing suites to catch scalability issues before production releases.

## EDUCATION

### Sharda University

2020 – 2024

B.Tech in Computer Science (Specialization in AI & ML)

GPA: 7.8/10.0

## TECHNOLOGIES & SKILLS

**Languages:** Python, SQL, Bash

**Frameworks & Libraries:** FastAPI, Django, Django REST Framework (DRF), Streamlit, LangChain, Hugging Face Transformers, Scikit-learn, TensorFlow, PyTorch, OpenCV, NumPy, Pandas, Matplotlib, Librosa

**AI / ML:** Retrieval-Augmented Generation (RAG), Semantic Search, Embedding Workflows, LLM Deployment, Multi-Agent Systems, Prompt Engineering, NLP, Named Entity Recognition (NER), Transformers, Transfer Learning, CNN Architectures, GPU Inference, CUDA Acceleration

**Cloud & DevOps:** Docker, Kubernetes, Helm, Terraform, GitHub Actions (CI/CD), Azure Application Gateway, Azure Key Vault, AWS EC2, Cloudflare, Nginx, Certbot, RabbitMQ, Microsoft Office WOPI Server, Collabora WOPI Server

**Tools:** Git, Postman, VSCode, CUDA, Prometheus, Grafana, Sentry, k6, REST APIs, SSL/TLS, Systemd, Microservices

**Practices:** MLOps, CI/CD Pipelines, Kubernetes Orchestration, Infrastructure as Code, Containerization, Observability, Distributed Systems, High Availability, Data Security & Privacy, Encryption, Scalable Web Architectures

## CERTIFICATIONS

---

- Google Cloud Certification
- Machine Learning A-Z: Python & R in Data Science
